

Innovative solutions for

FLATWORK MANAGEMENT

The perfect software solution

Efficient and transparent - optimal consumption management
in the hotel, gastronomy and healthcare sectors

Flatwork and ward supply

Reduce your costs through professional consumption management: whether hotel, hospital or residential and nursing home - with TIKOS you have all your stocks under control.

For all departments or wards, the delivery quantities can be recorded and evaluated exactly to the day. All common methods for determining the demand are possible:

- **Suggested quantities**
- **Actual-target comparison**
- **Orders**
- **Holiday orders, etc.**

Invoicing

When it comes to invoicing, you are highly flexible. Budget or patient day invoicing, by piece, weight, or according to various rental models - different invoicing variants are your basis for a first-class negotiating position with your customers.

Consumption control

Articles can be evaluated by piece, weight, and turnover. Consumption figures can be determined optionally per bed, per patient day, per invoicing day, or per case.

TIKOS keeps your business moving!

With the texOrder app and the texPortal web solution, you or your customers can carry out orders and inventories regardless of location. Actual quantities recorded using the texScan RFID app are directly compared with the target quantities you have stored, and the appropriate delivery quantity is automatically generated.

Individual item tracking with RFID technology

The management of each individual item is an integral part of modern laundry processes. Regardless of whether barcode, QR code, or RFID chip, individually or in combination - TIKOS serves all variants and supports all frequency ranges of RFID technology.

The objective is to simplify work steps, eliminate sources of error, and have a reliable overview of all stocks. Depending on the reading unit, items can be processed individually, in a batch, in laundry bags or even in entire laundry containers. This applies to flatwork as well as mops, workwear, OR textiles, and dust control mats.

OR textiles

Absolute reliability regarding sterility must be guaranteed in the area of OR textiles.

TIKOS supports the packing process and contributes significantly to quality assurance. Each packed set receives a unique production number, which in turn can be assigned to a sterilisation batch. The accompanying documents are printed automatically. Using the production number, each individual set and its contents can be clearly identified - even after many years.

Anti-embolism stockings

Medical products can only be processed according to strict regulations.

Complete traceability must be ensured for all articles. The permanent verification of the circulation cycles of anti-embolism stockings guarantees re-usability.

Cleaning mops

Mops are sorted specifically by type and bundled using RFID technology.

The finished containers are labelled program-controlled and charged to the customer by a scanning process. The current status of each individual mop can be clearly identified.

Paperless production with app and web solutions

Manage your processes digitally - in your laundry and directly at the customer's premises. Benefit from absolutely paperless process management with high transparency.

The texOrder app

Give your customers a smart tool for carrying out orders and inventories. This allows your customers themselves to record the quantities exactly where they actually occur - even offline. The article sequence can also be defined individually for each customer. Ensure efficient and digital laundry management with the texOrder app.

The texScan app

The RFID scanner app is a completely flexible instrument for digital quantity recording during inventories. Various scanning points at your customer's premises (cost centres, wards, etc.) can be freely defined and the movements of laundry items at these points can be recorded without manual input. Digitise the inventory and optimise your work-flow.

The web solution texPortal for order and inventory

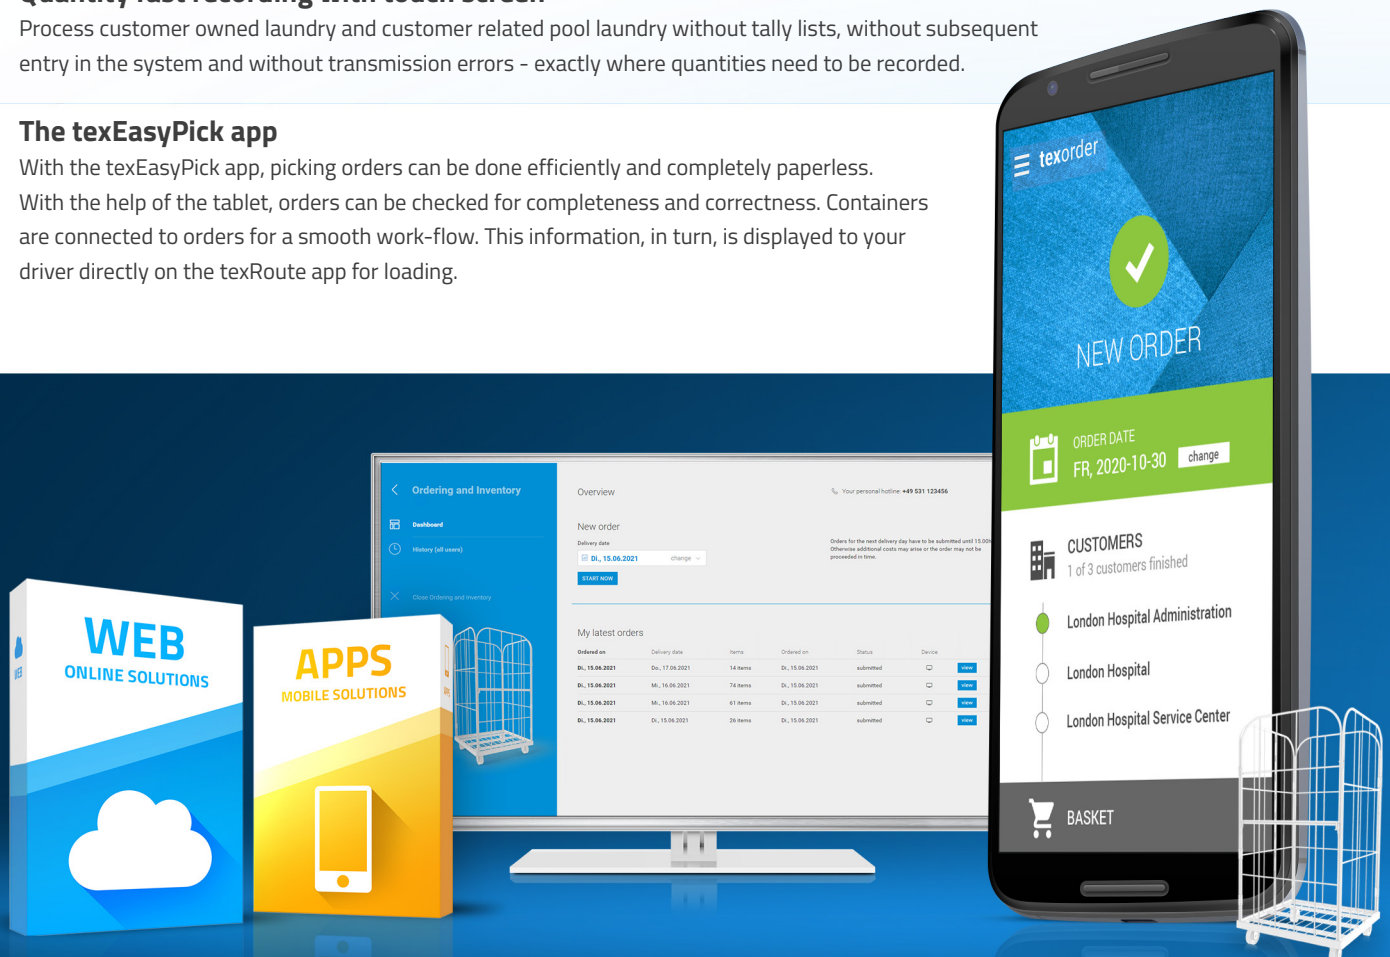

With the texPortal, your customers can place orders and take inventory completely time-independent via an internet portal. Suggested quantities simplify the ordering process for your customers, and maximum order quantities can be set to the exact day of the week. A wide variety of evaluations enable optimised laundry management for you and your customers.

Quantity fast recording with touch screen

Process customer owned laundry and customer related pool laundry without tally lists, without subsequent entry in the system and without transmission errors - exactly where quantities need to be recorded.

The texEasyPick app

With the texEasyPick app, picking orders can be done efficiently and completely paperless. With the help of the tablet, orders can be checked for completeness and correctness. Containers are connected to orders for a smooth work-flow. This information, in turn, is displayed to your driver directly on the texRoute app for loading.

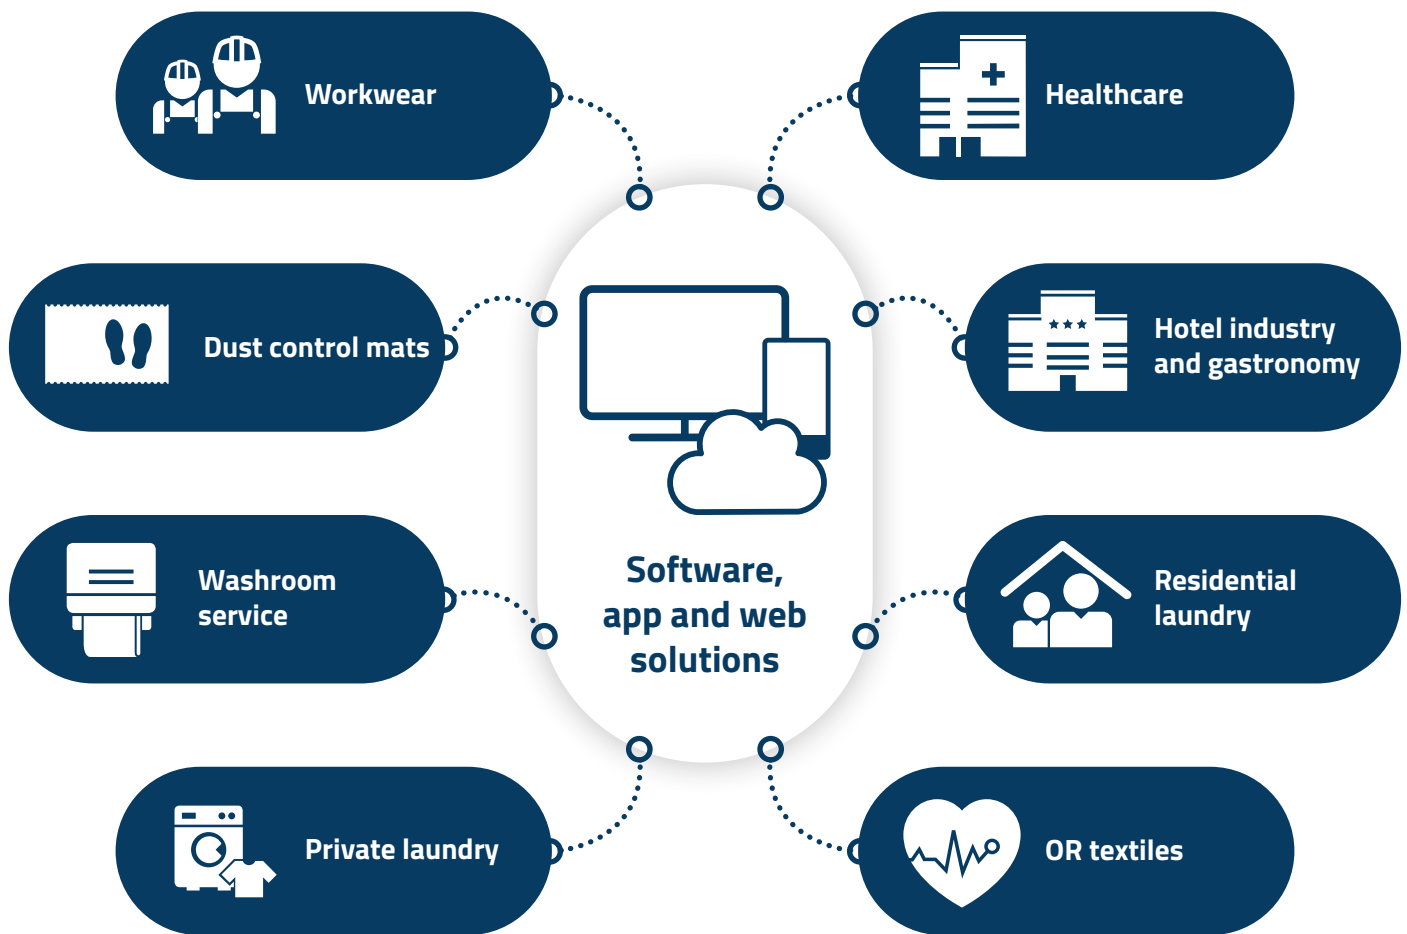

The modules of the TIKOS product family at a glance

The perfectly coordinated modules integrate seamlessly into your business processes and the processes of your customers.

Discover our digital solutions for your laundry 4.0

Digital services and processes are the challenges of the future. Technologies such as RFID create absolutely new possibilities for paperless production. Start with us into the future of laundry 4.0.
