

Innovative solutions for

# RESIDENTIAL AND PRIVATE LAUNDRY

## The modular solution package

Transparent and comprehensive - all processes safely under control with maximum efficiency and flexibility

# Residential laundry

TIKOS helps you solve the logistical challenge and provide each resident with their textiles, cleaned individually and professionally. Each textile item is marked with an identification number (barcode, QR code, RFID chip) and related to the resident. Individual processing steps can be defined for each customer.

## **Lot system solves space problem**

There is often not enough free shelf space at the goods-out area in laundries for customers with many residents. TIKOS solves this problem already at the goods-in: the items are washed in freely definable production batches.

## **Convenient aids for organising and sorting**

Fast sorting saves time and money. TIKOS helps you with this: at the goods-in, the processing type is displayed for each item, at the goods-out, the shelf compartment in which the item is to be sorted. A voice assistant or colour codes facilitate sorting as well. All common sorting aids such as paternosters or LED shelf controls can be connected easily.

## **Extensive invoicing variants**

What kind of invoicing does your customer prefer? All invoicing methods commonly used in practice are integrated in TIKOS. A comprehensive selection of invoicing systems is available for client control.

# Internet portal and mobile app

Register and de-register residents, conveniently assign textiles to residents via an internet portal and a mobile app, and easily access evaluations and inventories.

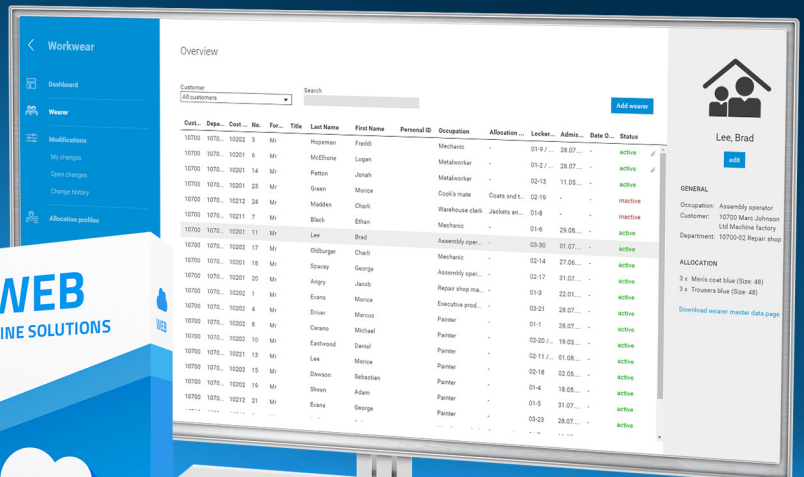

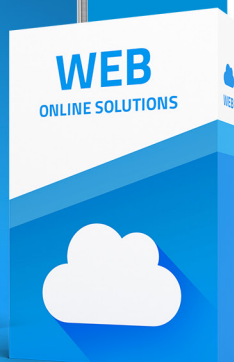

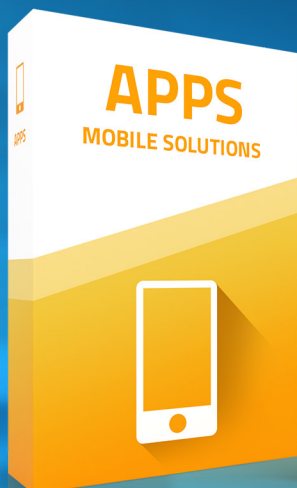

## The online solution texPortal

The internet portal provides your client with an uncomplicated and up-to-date insight into stocks, movements, item status, and invoice data. In addition, your client can easily enter resident registrations and de-registrations or other data changes online at any time. By automating these processes, a lot of work can be done by your customers themselves. This saves time and reduces costs.

## The mobile app texUniScan

Increase flexibility with the universally applicable texUniScan app and manage smaller processes - directly in the app, directly on site. Residential laundry can be assigned right in the residence. A smartphone or tablet is sufficient for this. The expensive acquisition and maintenance of fixed PC workstations is no longer necessary.

- ✓ Intuitive usability
- ✓ Approved workflows
- ✓ Integrated scanner

# TUNES universal registration system

TUNES is a universal multifunctional tool for the registration of non-permanently marked textiles. You can record articles at the goods-in area at top speed, benefit from independent counting of articles, fully automatic invoicing, and much more.

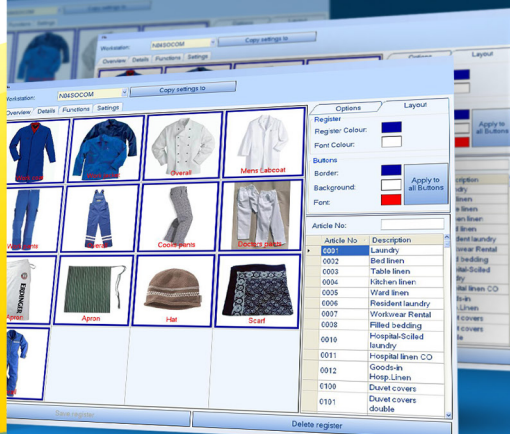

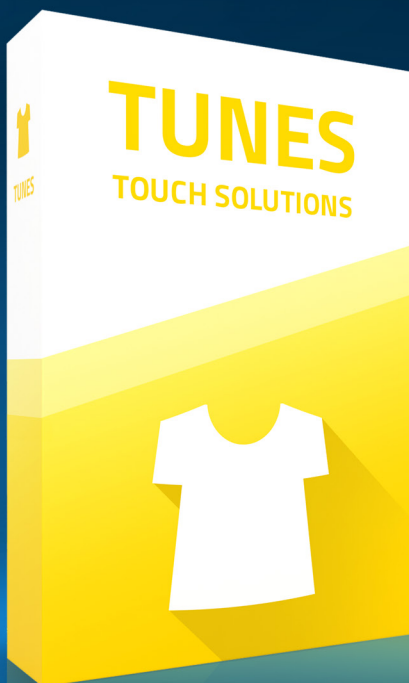

## Intuitive usability

The program is operated via a touch screen. The advantage: a clear display of all important functions and articles at a glance. The user interface can be designed according to your own needs. More comfort is not possible.

## Tracking laundry items

The software can be connected to a wide variety of laundry labelling systems. Labelling with barcodes or QR codes ensures the tracking of individual items and their sorting in the expedition. Pre-sorting of the articles is no longer necessary. Backlogs can be identified precisely.

- ✓ Freely configurable
- ✓ High-speed item logging
- ✓ No more need to pre-sort and count items
- ✓ Connection to many labelling systems

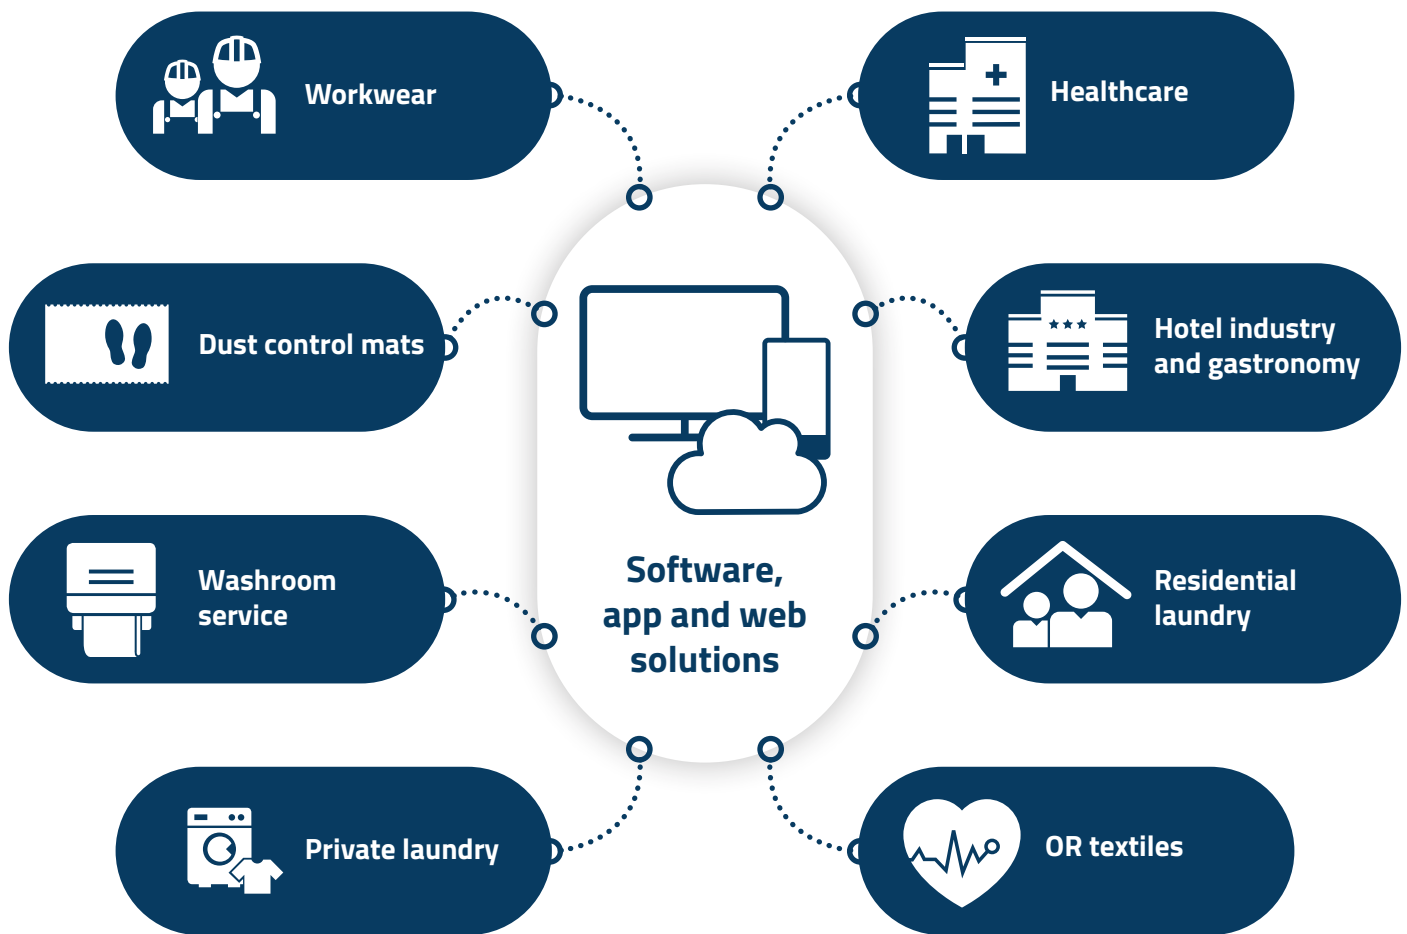

# The solution at a glance

Modular, flexible, smart: the innovative solution package for the professional processing of residential and private laundry meets all requirements at the highest level.

# Discover our digital solutions for your laundry 4.0

Digital services and processes are the challenges of the future. Technologies such as RFID create absolutely new possibilities for paperless production. Start with us into the future of laundry 4.0.
