

TEKAS dry cleaning

The multifunctional POS solution for the textile care industry

TEKAS offers extensive possibilities to improve your service and thus increase customer satisfaction. This POS solution was specially developed for the requirements of the textile care industry. As a practice-oriented solution, it convinces with a structured design, a wide range of functions and an easy handling.

The TEKAS basic equipment contains all the essential functions to map your everyday cleaning process with all its variants. In addition, use further TEKAS modules for an extended range of services and put together your own individual POS solution.

In order to comply with the regulations of the German Cash Register Security Ordinance and the Cash Register Security Ordinance in Austria, we offer an interface module for connecting a technical security device. A commercially available technical security device with a certificate period of five years is connected. In addition, the module includes the necessary tools for reporting to the tax authorities, archiving, and data export.

Touch screen interface

- Clear and structured design of the user interface
- Individual configuration of the user interface for each cash register
- 15 article levels with up to 25 articles each can be stored (a total of 375 direct selection buttons)
- Additional divers key for access to the entire article master data without restrictions in quantity

Connection of branches via Internet

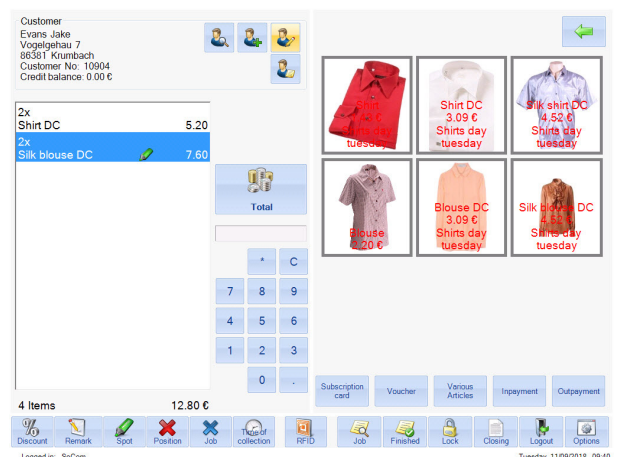

- Networked branches
- Central data administration

Various price lists and discounts

- Customer-specific
- Based on outlets
- Time-controlled for discount promotions and special prices, e.g. „Happy Hour“
- Discounts at article and customer level
- Direct, manual input to the cash register

Individual user administration

- Different levels of user rights
- Login via personnel card, chip, or manual input of login data
- Capturing of working time

The sales conditions of the german dry-cleaning trade apply!

TEKAS dry cleaning

The multifunctional POS solution for the textile care industry

Prepaid function

- Up to three magnetic cards can be stored per customer: customers' cards (e.g. credit card, EC card) or company-owned magnetic cards
- Mobile customer card via freeware apps
- Credit can optionally be topped up with a higher value or with a fixed discount

Subscription card

- E.g. twelve shirts for the price of ten
- Period of validity and article type individually definable

Voucher

- Creation directly from TEKAS with consecutive numbers
- Optional pre-printed, numbered vouchers can also be selected
- Partial amounts and cross-branch redemption possible
- All booking details can be viewed via history

Second drawer

- Parallel usage of two cash drawers

Happy Hour

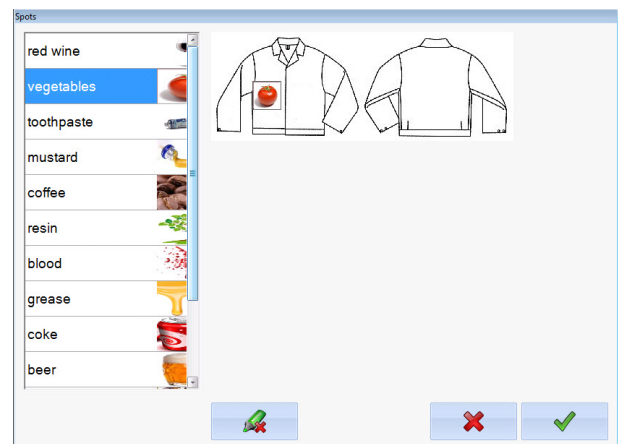

- Promotion prices and/or discounts
- Specific weekdays, time periods, and branch assignments can be planned individually
- Controllable via different price lists

Pick-up times

- Hourly calculation by means of branch opening times and the average processing time
- Manual correction possible at order acceptance
- Printed on the customer receipt and the item receipts

Stain capturing

- Predefinition of stain types (e.g. red wine, grease)
- Precise positioning of stains on laundry items via selection on the touch screen
- Display of a pictogram of the item with the deposited stains at the presorting or ironing station for easier and quicker follow-up control
- Information on special stains remains stored even after the order has been collected, permanently traceable via the history

RFID marking

- The customer's garments are permanently tagged with a chip
- Unique identification of laundry items
- Assignments of unique remarks such as manufacturer, colour, and size
- Complete article storage can be viewed per customer
- Automation of certain processes possible (e.g. automated shirt acceptance)
- Combined operation of barcodes and RFID chips is possible without any restrictions

TEKAS dry cleaning

The multifunctional POS solution for the textile care industry

ZVT interface (EC terminal)

- Connection of a payment terminal for EC cards with TEKAS
- Direct communication between TEKAS and the terminal

Customer terminal for master data recording

- Customers register themselves with the most important data
- Touch screen terminal with simple user interface
- Quick and easy - no waiting times at the collection point

Terminal for the distribution of items

- Special output terminal for highly frequented branches (in addition to the POS system)
- Only for the distribution of finished jobs (no acceptance of jobs or payments possible)
- Completely identical output functions as in TEKAS

Pre-sorting

- Special workstation only for pre-sorting or for recording ironing hours at the ironing table
- Software license can be used by up to three users at once
- Identification of cleaned items via barcode or RFID chip
- After inspection, direct allocation of the item - grouped by order - to a specific place in the pre-sorting or return for follow-up-treatment

Linkage to sorting belts and shelves

- Automatic linkage by scanning barcodes and RFID chips at pre-sorting and end-sorting

End-sorting

- Completion / packing for collection of orders
- Direct assignment of an order to a position at the end-sorting belt
- Order can be found quickly as the storage position is displayed immediately
- Individually programmable interfaces to automatic collection systems

Additional functions in combination with TIKOS

TEKAS is 100% compatible with TIKOS, the ERP software for the textile care industry: full service and optimised work flow offer considerable additional benefits for dry cleaners and their customers.

- Delivery note and collective invoice
- Accounting interface (e.g. DATEV)
- General price increases (by percentage or amount)
- Numerous evaluations and reports
- Collection points management
- Integration of private customers into the TIKOS residential laundry module (for standardised processes)
- Sales articles with storage management
- Claim management
- Serial letter function
- Various evaluations per branch
- Available in several languages
