

texScan app

The smart RFID scan app for recording quantities

Numerous areas of application in one: the texScan app is the **flexible multifunctional instrument** for recording quantities. In combination with an RFID hand-held scanner, quantities are recorded in seconds.

Numerous areas of application

The texScan app connects a hand-held RFID scanner to a smartphone via Bluetooth. The connection of external scanners via Android Broadcast is also possible. The app is characterised by numerous functions and settings in addition to its **high level of user-friendliness**. For example, in addition to **recording incoming and outgoing goods**, it also enables carrying out inventories. Furthermore, scanning points (e.g. cost centres, departments, etc.) can be freely defined and the movements of laundry items recorded at these points.

However, the texScan app is not only used in the laundry, thanks to the **mobile solution**, quantity recording is already possible at your customers' premises. An increased flow of goods and information, resulting in more transparency and efficiency.

Advantages

- Strengthening your image as a modern and innovative company
- Optimisation of your processes: perfect integration of data in TIKOS
- Maximum accuracy: quantities are recorded where they are created - at your customers
- Compatible with a wide range of devices
- Flexible use through the connection of external scanners for barcodes and/or RFID chips via Bluetooth or Android Broadcast

Functions

- Recording of incoming and outgoing goods
- Inventories at the customer's premises
- Recording of operational throughput data at freely definable scanning points
