

texUniScan app

App for universal use

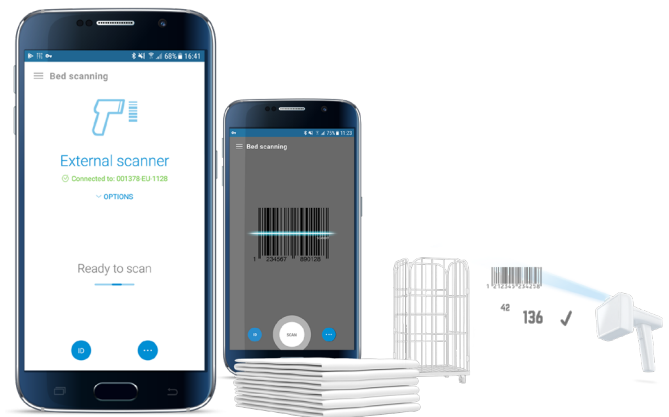

Scan **barcodes, QR codes or RFID chips** with the texUniScan app. You can **manage processes** both in production and on-site at the customer's premises, comprehensively and flexibly thanks to the mobile solution.

Increase the flexibility in your company

Whether in healthcare, hotels, gastronomy or industry, the texUniScan app offers the right solution **for every area of application**. A smartphone or tablet is sufficient for this. The costly acquisition and maintenance of fixed PC workstations are no longer necessary. Therefore: increase the flexibility in your company with the universally applicable texUniScan app and manage smaller processes directly in the app.

Individually applicable

Items can, for example, be quickly identified and linked to each other. Containers can also be directly assigned to the respective customer and the corresponding delivery note. Carrying out an inventory at your customers' premises, for example, can also be managed easily and mobilely with this app. Even more complex scenarios such as a locker check at the customer's site or the allocation of residential laundry are possible.

Additional calculation of waste disposal

Mobile scanning can be used to additionally record 'waste' in all laundry items. Precise documentation of waste removal is guaranteed with the help of predefined comments and the simple storage of photos. The additional expense for waste removal can be calculated automatically and billed transparently as an additional service. In addition to generating an additional source of income, you also increase your service level.

Advantages

- Strengthening your image as a modern and innovative company
- Control of smaller processes directly in production
- Absolutely universally applicable
- Further processing of the recorded information with the help of individual or standardised modules
- Mobile barcode and QR code scanner via camera
