

TIKOS price management

The module for the optimal price

Optimise your prices to ensure the **profitability of your business**. With our price management module, you manage the prices of your products and adjust them to specific requirements.

Price changes: percentage or absolute

Price changes, whether a price increase or a price reduction, can be carried out either **individually** or via **automatic mass maintenance**. Customer, list, sales, residual value, and supplier purchase prices can be changed via price management. Prices can be changed by a percentage or by an absolute amount. Whether the newly calculated prices should be rounded or whether they should be saved with a desired number of decimal places can be set individually. By entering a validity date, prices can be adjusted retroactively or for a future date. After activating the price change, the prices are also automatically changed in orders that have not yet been calculated, provided they are within the validity period. In the **price history** you can see all price changes at a glance - those of a customer, a supplier as well as an article list price.

Price change customer master data										
Specific customers										
Selection										
Customer	Matchcode	Article	Matchcode	Price list	Rhythm	Processing price		Percent	ite	
						Old	New			
<input type="checkbox"/>	10100	Ster	0001	Laundry	1	0,85 €	0,87 €	2,35 %	0	
<input type="checkbox"/>	10100	Ster	0505	Cook's trousers	1	1,35 €	1,38 €	2,22 %		
<input type="checkbox"/>	10100	Ster	0506	Cook's jacket	1	1,08 €	1,10 €	1,85 %		
<input type="checkbox"/>	10100	Ster	0503	Apron	1	1,01 €	1,03 €	1,98 %		
<input type="checkbox"/>	10100	Ster	0510	Waist apron	1	0,63 €	0,64 €	1,59 %		
<input type="checkbox"/>	10100	Ster	511102	Dust mat 110/280 brown	1	2 Week(s)	11,46 €	11,69 €	2,01 %	
<input type="checkbox"/>	10100	Ster	511203	Dust mat 150/280 grey	1	1 Week(s)	7,67 €	7,82 €	1,96 %	

Automatic customer letters with individual texts

The price change can be carried out across several customers or suppliers or articles, also separately for rent, processing, sale and residual value. Before each final activation of the price change, the **prices can be revised at any time**. In a control list, old and new prices can be easily compared to check all changes for plausibility. If customer-specific prices are changed, customers can be informed of the new prices with an automated letter (in letter form or by email) before the price activation. The corresponding texts can, of course, be designed according to the customer's own needs. Optionally, customer information letters can also be printed as invoice attachments.

Advantages

- Individual or automated mass maintenance of changes to all prices
- Simple price increase or decrease, percentage or absolute amount
- Automatic price adjustment of all not yet invoiced orders according to the validity date
- Automatic customer letter with variable text, also as invoice attachment
- Post-processing of flat-rate changed prices possible before activation
- List of changed prices before activation
- Price history
