

TIKOS quantity fast recording

Paperless processing of laundry orders

Process customer-owned laundry and customer-related pool laundry **without tally sheets**, without re-entry in the system and **without transmission errors**. Our quantity fast recording module enables **completely paperless processing on the spot** where quantities need to be recorded. As a touch application, handling is very easy and convenient.

Paperless production

The TIKOS quantity fast recording module replaces all tally sheets. At any station (e.g. mangle or terry cloth plaiting machine) where quantities have to be recorded, it can be used to work completely paperless. All that needs to be done is to select the relevant customer and, if necessary, a department in the module. Using **preset, individually definable quantity buttons** (e.g. +5, +10), the quantity can be increased **with just one click** and thus simultaneously recorded for goods-out. In addition, order quantities can be called up directly from a machine connected via a basic interface*. The quantities are transferred directly into the system and can be used for all further work steps (creation of delivery notes, etc.). This eliminates the manual transfer of e.g. tally sheets. The result: no transmission errors. A plausibility check can also be carried out directly by the administration according to the dual control principle and the delivery note can be printed.

*Additional module (basic interface for order data) required

Direct assignment of containers

In combination with the TIKOS container management module and the texRoute app, the TIKOS quantity fast recording offers even more advantages. If a corresponding container is linked to the recorded quantity by means of a unique ID number, it is married directly to the laundry items and the data is passed on to the expedition - no paper, **fewer work steps**. In connection with the TIKOS container management, a label with all important information for the driver (address, route, quantity, and article) can be printed directly from the TIKOS quantity fast recording module for each container. This means that it is immediately visible on the container which article is in it and in which quantity. In connection with the texRoute app, all containers made available via the quantity fast recording are suggested to the driver for "loading".

Advantages

- Paperless production: recording of quantities at any counting point directly in the system
- Faster access to information
- Notable advantages when processing customer-owned laundry or customer-related pool laundry
- Direct connection to containers
- Simplified production
- No post-recording necessary
- Data consistency
