

# TIKOS storage orders workwear

## The module for efficient work in the storage area

Compile any order items at the workwear storage individually into storage orders and keep several employees busy with different orders at the same time – with our module storage orders workwear.

### Individual compilations

Orders in the storage area can be **easily grouped together**, individually according to customers, departments or wearers. Within this order, TIKOS automatically arranges similar articles in a clear and sensible order on the storage order or reservation list. This **saves time** and **reduces the number of steps required**. In addition, the current stock of each item can be called up in the system at any time.

### Several storage locations per article possible

Each individual item can be **assigned an exact storage location**. If similar items have to be stored in different places due to a lack of space in the storage - even if only for a short time - these individual items can be **assigned different storage locations** with this module. When compiling a storage order, TIKOS proposes the possible storage items for the selected item specification with the respective item stock for selection. The item stock shows new, used, and changed items. Thus, you can decide individually which article should be taken from which storage position.

Customer	Matchcode	Wearer name	Article no.	Description	Colour	Size	Quantity	Reservation date
10350	Hospital Guenzburg						7	
10700	Johnson Machine factory						14	
		(10700-03) 1 Evens Morice	250000	Waist jacket	01 blue	44	1	1 08.07.2003
		(10700-01) 6 McElhone Logan	210000	Men's coat	01 blue	50	2	2 14.05.2004
			250000	Waist jacket	01 blue	48	1	1 31.12.2003
			260000	Trousers	01 blue	48	1	1 31.12.2003
		(10700-03) 10 Eastwood Daniel	260000	Trousers	01 blue	52	9	9 05.05.2004

  

Article no.	Description	Colour	Size	Quantity	Old	New	Storage location	Used Storage location
210000	Men's coat	01 blue	50	2	2	10 0102	Shell 01 - Shell section 02	6 0102 Shell 01 - Shell section 02
250000	Waist jacket	01 blue	44	1	1			3
250000	Waist jacket	01 blue	48	1	1	10		4
260000	Trousers	01 blue	48	1	1	10		1
260000	Trousers	01 blue	52	9	9	4		

### Several options for delivery

Once all items have been assembled, they can be conveniently **assigned to the respective wearer** by scanning the barcodes or RFID chips. After completing the storage order, you decide whether it should be processed via the regular production route or separately with an individual delivery note. It is also possible to postpone the order for a later delivery, for example when processing clothing for new employees at your customer's who join the company at a later date.

### Replacement deliveries, exchange items and residual value

Items marked for replacement can be combined into a so-called replacement order by simply scanning them. Exchange items can be delivered to the respective wearer immediately after the request. TIKOS automatically takes care of retaining the respective items to be exchanged. If these are not returned within a configurable period of time, the automatic calculation of the residual value takes effect in connection with the residual value management module.

### Advantages

- Increased efficiency: automatic item compilation and shorter walking distances
- Individual combination of customer orders
- Digital storage of several storage locations per article specification
- Efficient processing of replacement orders
- Monitoring of item restitution
- Simple collective re-clothing on contract renewal
