

TIKOS washing plan management

Digital washing plans for greater flexibility

Create your digital washing plan and enable efficient utilisation of your washing lines. A deep level of detail with regard to the types of laundry enables you to optimally allocate your washing lines and at the same time maintain an overview. Even if changes are made at short notice, you can change your washing plan at any time - without empty times or waiting times in your production.

Paperless, actual and flexible

What used to require tedious Excel spreadsheets is now digital, clear and completely paperless with the TIKOS washing plan management module. Washing schedules can be created quickly and efficiently directly in TIKOS and are always up to date on production screens. Even last-minute changes can be made with just a few clicks and are immediately visible in production. The clear planning overview means your team always knows which washing order needs to run, when and on which line. User-specific permissions ensure that access remains secure and precisely controlled.

Washing plan - standardised or modified

TIKOS washing plan management enables the definition of standard washing plans for each individual day of the week as well as differentiated by cost centre - for example for specific washing lines or machines. This ensures structured and repeatable planning of washing orders. In the event of temporary deviations, for example due to public holidays, company holidays or special operations, existing standard schedules can be easily duplicated and adapted as required. Alternatively, a modified schedule can be stored as a weekday-related 'public holiday washing schedule', which can be reactivated with just a few clicks if required - without the need for manual configuration or reallocation of customer orders. This functionality ensures maximum efficiency with simultaneous flexibility in day-to-day operations.

Advantages

- Paperless production: digital washing plans can be viewed at any time in production
- Comprehensive plan overview
- Access to washing plans can be controlled by assigning user-specific rights
- Deep level of detail for accurate washing department status
- Absolute transparency – washing department status can be viewed online at any time for quick adjustments
