

# TIKOS Wash Info\*

## The washing schedule at a glance

A display of the current washing schedule in a **clear overview** - with our Wash Info module, this is possible at any time. Which customer has to be washed by when to ensure on-time production? With Wash Info, this **information is available at any time**. Every employee has an insight into the pending wash orders directly in the washhouse and receives a clear overview of how many soiled containers need to be washed.

### On-time washing

Critical times can be individually stored in the system. You define a period of time within which the processing of the laundry can become critical in terms of time. If an order is behind schedule, the corresponding customer record is automatically displayed in orange or red. This ensures that every employee is **informed in time** and you have an effective feature for **an on-time production process**.

### Automatic adjustment of containers

If laundry items are passed on for washing and the container is emptied, scanning the container automatically reduces the number of containers in your overview. If the job has been completely processed (number of containers = 0), the record **automatically disappears** from the list. The module TIKOS Wash Info is a stand-alone application and only serves for information.

Customer	Department	Container	Wash until	Next route
10110 Sunlight		6	23.03.2021 08:40	24.03.2021 07:00
10350 Hospital GZ		1	23.03.2021 09:00	24.03.2021 07:00
10400 Star		1	23.03.2021 09:00	24.03.2021 07:00
10100 Johansson		1	24.03.2021 13:00	25.03.2021 07:00
10120 Grand Hotel		2	29.03.2021 12:00	02.04.2021 07:00
10500 Swan		3	25.03.2021 09:00	27.03.2021 07:00
10190 Bella Italia		2	25.03.2021 12:00	27.03.2021 07:00
10530 Hospital MN		5	25.03.2021 13:00	27.03.2021 07:00
10170 Elderly home		1	29.03.2021 12:00	02.04.2021 07:00
10340 Poseidon		1	29.03.2021 12:00	02.04.2021 07:00
10720 Adam		2	29.03.2021 12:00	02.04.2021 07:00

### Advantages

- Current washing jobs at a glance
- Current washing schedule visible to every employee
- Automatic adjustment of the number of containers
- On-time information in case of delay
- On-time production process

\* The use of this module is only possible in connection with the modules TIKOS container management, TIKOS route management and an application for scanning destinations.
